

The abstract opens with enough text to establish the left column as a continuous reading region before the boundary case appears.

A second left-column block keeps the staggered geometry distinct from a table or a row-aligned grid.

Its final left-column sentence reaches the foot of the column and

continues at the head of the right column without a semantic break.

The right column then resumes ordinary abstract prose after the continuation has completed.

A final block closes the abstract and remains inside the same model-owned region.
