

Page rotation /Rotate 90

The intermediate representation lowers a page of drawing operators into a structure that carries paragraphs, formulas and styles. Each character retains its own bounding box, font identity and render order so that the typesetter can place translated glyphs without losing the original layout.

Page rotation /Rotate 180

The intermediate representation lowers a page of drawing operators into a structure that carries paragraphs, formulas and styles. Each character retains its own bounding box, font identity and render order so that the typesetter can place translated glyphs without losing the original layout.

Page rotation /Rotate 270

The intermediate representation lowers a page of drawing operators into a structure that carries paragraphs, formulas and styles. Each character retains its own bounding box, font identity and render order so that the typesetter can place translated glyphs without losing the original layout.
